About this Manual

This manual is intended for service personnel who have completed sufficient training to undertake the maintenance and inspection of personal computers.

It is organized to allow you to look up basic information for servicing and/or upgrading components of the *D900C/D901C* series notebook PC.

The following information is included:

Chapter 1, Introduction, provides general information about the location of system elements and their specifications.
Chapter 2, Disassembly, provides step-by-step instructions for disassembling parts and subsystems and how to upgrade elements of the system.

Appendix A, Part Lists

Appendix B, Schematic Diagrams

Preface

IMPORTANT SAFETY INSTRUCTIONS

Follow basic safety precautions, including those listed below, to reduce the risk of fire, electric shock and injury to persons when using any electrical equipment:

1. Do not use this product near water, for example near a bath tub, wash bowl, kitchen sink or laundry tub, in a wet basement or near a swimming pool.
2. Avoid using a telephone (other than a cordless type) during an electrical storm. There may be a remote risk of electrical shock from lightning.
3. Do not use the telephone to report a gas leak in the vicinity of the leak.
4. Use only the power cord and batteries indicated in this manual. Do not dispose of batteries in a fire. They may explode. Check with local codes for possible special disposal instructions.
5. This product is intended to be supplied by a Listed Power Unit (Full Range **220W** AC/DC Adapter – AC Input 100 - 240V, 50 - 60Hz DC Output 20V, 11A).

CAUTION

Always disconnect all telephone lines from the wall outlet before servicing or disassembling this equipment.

**TO REDUCE THE RISK OF FIRE, USE ONLY NO. 26 AWG OR LARGER,
TELECOMMUNICATION LINE CORD**

This Computer's Optical Device is a Laser Class 1 Product

Instructions for Care and Operation

The notebook computer is quite rugged, but it can be damaged. To prevent this, follow these suggestions:

1. **Don't drop it, or expose it to shock.** If the computer falls, the case and the components could be damaged.

2. **Keep it dry, and don't overheat it.** Keep the computer and power supply away from any kind of heating element. This is an electrical appliance. If water or any other liquid gets into it, the computer could be badly damaged.

3. **Follow the proper working procedures for the computer.** Shut the computer down properly and don't forget to save your work. Remember to periodically save your data as data may be lost if the battery is depleted.

Preface

4. **Avoid interference.** Keep the computer away from high capacity transformers, electric motors, and other strong magnetic fields. These can hinder proper performance and damage your data.
5. **Take care when using peripheral devices.**

Power Safety

The computer has specific power requirements:

- Only use a power adapter approved for use with this computer.
- Your AC adapter may be designed for international travel but it still requires a steady, uninterrupted power supply. If you are unsure of your local power specifications, consult your service representative or local power company.
- The power adapter may have either a 2-prong or a 3-prong grounded plug. The third prong is an important safety feature; do not defeat its purpose. If you do not have access to a compatible outlet, have a qualified electrician install one.
- When you want to unplug the power cord, be sure to disconnect it by the plug head, not by its wire.
- Make sure the socket and any extension cord(s) you use can support the total current load of all the connected devices.
- Before cleaning the computer, make sure it is disconnected from any external power supplies.

Power Safety Warning

Before you undertake any upgrade procedures, make sure that you have turned off the power, and disconnected all peripherals and cables (including telephone lines). It is advisable to also remove your battery in order to prevent accidentally turning the machine on.

Battery Precautions

- Only use batteries designed for this computer. The wrong battery type may explode, leak or damage the computer.
- Do not continue to use a battery that has been dropped, or that appears damaged (e.g. bent or twisted) in any way. Even if the computer continues to work with a damaged battery in place, it may cause circuit damage, which may possibly result in fire.
- Recharge the batteries using the notebook's system. Incorrect recharging may make the battery explode.
- Do not try to repair a battery pack. Refer any battery pack repair or replacement to your service representative or qualified service personnel.
- Keep children away from, and promptly dispose of a damaged battery. Always dispose of batteries carefully. Batteries may explode or leak if exposed to fire, or improperly handled or discarded.
- Keep the battery away from metal appliances.
- Affix tape to the battery contacts before disposing of the battery.
- Do not touch the battery contacts with your hands or metal objects.

Battery Disposal

The product that you have purchased contains a rechargeable battery. The battery is recyclable. At the end of its useful life, under various state and local laws, it may be illegal to dispose of this battery into the municipal waste stream. Check with your local solid waste officials for details in your area for recycling options or proper disposal.

Caution

Danger of explosion if battery is incorrectly replaced. Replace only with the same or equivalent type recommended by the manufacturer. Discard used battery according to the manufacturer's instructions.

Preface

1: Introduction

Overview

This manual covers the information you need to service or upgrade the **D900C/D901C** series notebook computer. Information about operating the computer (e.g. getting started, and the *Setup* utility) is in the *User's Manual*. Information about drivers (e.g. VGA & audio) is also found in *User's Manual*. That manual is shipped with the computer.

Operating systems (e.g. *Windows XP*, *Windows Vista*, etc.) have their own manuals as do application software (e.g. word processing and database programs). If you have questions about those programs, you should consult those manuals.

The **D900C/D901C** series notebook is designed to be upgradeable. See ***“Disassembly” on page 2 - 1*** for a detailed description of the upgrade procedures for each specific component. Please note the warning and safety information indicated by the “” symbol.

The balance of this chapter reviews the computer's technical specifications and features.

System Specifications

Feature	Specification
Processor Types	Intel® Core™ 2 Duo Processor LGA775 Package (775-pin) E6300/ E6400 65nm (65 Nanometer) Process Technology 2MB On-die L2 Cache & 1066MHz FSB 1.86/ 2.13 GHz
	Intel® Core™ 2 Duo Processor LGA775 Package (775-pin) E6600/ E6700 65nm (65 Nanometer) Process Technology 4MB On-die L2 Cache & 1066MHz FSB 2.40/ 2.66 GHz

2: Disassembly

Overview

This chapter provides step-by-step instructions for disassembling the **D900C/D901C** series notebook's parts and sub-systems. When it comes to reassembly, reverse the procedures (unless otherwise indicated).

We suggest you completely review any procedure before you take the computer apart.

Procedures such as upgrading/replacing the RAM, CD device and hard disk are included in the User's Manual but are repeated here for your convenience.

To make the disassembly process easier each section may have a box in the page margin. Information contained under the figure # will give a synopsis of the sequence of procedures involved in the disassembly procedure. A box with a  lists the relevant parts you will have after the disassembly process is complete. **Note:** The parts listed will be for the disassembly procedure listed ONLY, and not any previous disassembly step(s) required. Refer to the part list for the previous disassembly procedure. The amount of screws you should be left with will be listed here also.

A box with a  will also provide any possible helpful information. A box with a  contains warnings.

An example of these types of boxes are shown in the sidebar.

Information
Warning

Disassembly

NOTE: All disassembly procedures assume that the system is turned **OFF**, and disconnected from any power supply (the battery is removed too).

Maintenance Tools

The following tools are recommended when working on the notebook PC:

- M3 Philips-head screwdriver
- M2.5 Philips-head screwdriver (magnetized)
- M2 Philips-head screwdriver
- Small flat-head screwdriver
- Pair of needle-nose pliers
- Anti-static wrist-strap

Connections

Connections within the computer are one of four types:

Locking collar sockets for ribbon connectors	To release these connectors, use a small flat-head screwdriver to gently pry the locking collar away from its base. When replacing the connection, make sure the connector is oriented in the same way. The pin1 side is usually not indicated.
Pressure sockets for multi-wire connectors	To release this connector type, grasp it at its head and gently rock it from side to side as you pull it out. Do not pull on the wires themselves. When replacing the connection, do not try to force it. The socket only fits one way.
Pressure sockets for ribbon connectors	To release these connectors, use a small pair of needle-nose pliers to gently lift the connector away from its socket. When replacing the connection, make sure the connector is oriented in the same way. The pin1 side is usually not indicated.
Board-to-board or multi-pin sockets	To separate the boards, gently rock them from side to side as you pull them apart. If the connection is very tight, use a small flat-head screwdriver - use just enough force to start.

Maintenance Precautions

The following precautions are a reminder. To avoid personal injury or damage to the computer while performing a removal and/or replacement job, take the following precautions:

1. **Don't drop it.** Perform your repairs and/or upgrades on a stable surface. If the computer falls, the case and other components could be damaged.
2. **Don't overheat it.** Note the proximity of any heating elements. Keep the computer out of direct sunlight.
3. **Avoid interference.** Note the proximity of any high capacity transformers, electric motors, and other strong magnetic fields. These can hinder proper performance and damage components and/or data. You should also monitor the position of magnetized tools (i.e. screwdrivers).
4. **Keep it dry.** This is an electrical appliance. If water or any other liquid gets into it, the computer could be badly damaged.
5. **Be careful with power.** Avoid accidental shocks, discharges or explosions.
 - Before removing or servicing any part from the computer, turn the computer off and detach any power supplies.
 - When you want to unplug the power cord or any cable/wire, be sure to disconnect it by the plug head. Do not pull on the wire.
6. **Peripherals** – Turn off and detach any peripherals.
7. **Beware of static discharge.** ICs, such as the CPU and main support chips, are vulnerable to static electricity. Before handling any part in the computer, discharge any static electricity inside the computer. When handling a printed circuit board, do not use gloves or other materials which allow static electricity buildup. We suggest that you use an anti-static wrist strap instead.
8. **Beware of corrosion.** As you perform your job, avoid touching any connector leads. Even the cleanest hands produce oils which can attract corrosive elements.
9. **Keep your work environment clean.** Tobacco smoke, dust or other air-born particulate matter is often attracted to charged surfaces, reducing performance.
10. **Keep track of the components.** When removing or replacing any part, be careful not to leave small parts, such as screws, loose inside the computer.

Cleaning

Do not apply cleaner directly to the computer, use a soft clean cloth.

Do not use volatile (petroleum distillates) or abrasive cleaners on any part of the computer.

Power Safety Warning

Before you undertake any upgrade procedures, make sure that you have turned off the power, and disconnected all peripherals and cables (including telephone lines). It is advisable to also remove your battery in order to prevent accidentally turning the machine on.

Disassembly Steps

The following table lists the disassembly steps, and on which page to find the related information. **PLEASE PERFORM THE DISASSEMBLY STEPS IN THE ORDER INDICATED.**

To remove the Battery:

1. Remove the battery *page 2 - 5*

To remove the Optical Device:

1. Remove the battery *page 2 - 5*
2. Remove the Optical device *page 2 - 6*

To remove the HDD:

1. Remove the battery *page 2 - 5*
2. Remove the HDD *page 2 - 7*

To remove the System Memory:

1. Remove the battery *page 2 - 5*
2. Remove the System Memory *page 2 - 9*

To remove the Processor:

1. Remove the battery *page 2 - 5*
2. Remove the Processor *page 2 - 11*

To remove the VGA card:

1. Remove the battery *page 2 - 5*
2. Remove the VGA card *page 2 - 12*

To remove the Keyboard:

1. Remove the battery *page 2 - 5*
2. Remove the Keyboard *page 2 - 15*
- 3.

To remove the Wireless LAN Module:

1. Remove the battery *page 2 - 5*
2. Remove the Keyboard *page 2 - 15*
3. Remove the Wireless LAN *page 2 - 16*

To remove the Bluetooth Module:

1. Remove the battery *page 2 - 5*
2. Remove the Keyboard *page 2 - 15*
3. Remove the Bluetooth *page 2 - 17*

To remove the Modem:

1. Remove the battery *page 2 - 5*
2. Remove the Keyboard *page 2 - 15*
3. Remove the Modem *page 2 - 18*

To remove the TV Tuner Card:

1. Remove the battery *page 2 - 5*
2. Remove the Keyboard *page 2 - 15*
3. Remove the TV tuner card *page 2 - 19*

Removing the Battery

1. Turn the computer off, and turn it over.
2. Loosen screws ① - ③.
3. Release the battery.
4. Lift the battery ④ (**Figure b**) out of the bay as indicated.

Figure 1
Battery Removal

- a. Loosen screws.

Removing the Optical (CD/DVD) Device

1. Turn off the computer, and turn it over and remove the battery ([page 2 - 5](#)).
2. Locate the hard disk bay cover and remove screws 1 - 4, and remove the bay cover 5.
3. Remove screw 6.
4. Use the screwdriver to push the optical device 7 out of the computer at point 8.
5. Reverse the process to install the new device.

5. Hard Disk Bay Cover
7. Optical Device

- 5 Screws

Removing the Hard Disk Drive

The hard disk drive is mounted in a removable case and can be taken out to accommodate other 2.5" SATA hard disk drives with a height of 9.5mm (h). Follow your operating system's installation instructions, and install all necessary drivers and utilities (as outlined in **Chapter 4 of the User's Manual**) when setting up a new hard disk.

Hard Disk Upgrade Process

1. Turn off the computer, and turn it over and remove the battery ([page 2 - 5](#)).
2. Locate the hard disk bay cover and remove screws **1** - **4**.
3. Remove the bay cover **5**.
4. Remove screws **6** - **8** release the cable **9** and lift the hard disk assembly **10** out of the computer.
5. Remove screws **11** - **18**.
6. Separate the hard disk(s) **21** from the bracket **19** and connector cable **20**.
7. Reverse the process to install a new hard disk(s).

Figure 3
HDD Assembly Removal

Disassembly

Figure 4 Secondary HDD Assembly Removal

- a. Remove the screws and slide the hard disk assembly in the direction of the arrow.
- b. Lift the hard disk assembly out of the computer.

Removing the Hard Disk(s) in the Secondary HDD Bay

1. Turn **off** the computer, and turn it over and remove the battery.
2. The secondary hard disk bay is located under the battery compartment.
3. Remove screw **1**.
4. Slide the hard disk assembly in the direction of the arrow **2**.
5. Lift the hard disk assembly **3** out of the compartment.
6. Remove the screws to release the hard disk from the case.

a.

b.

3. Hard Disk Assembly

- 1 Screw

Removing the System Memory (RAM)

The computer has two memory sockets for 200 pin Small Outline Dual In-line Memory Modules (SO-DIMM) DDR II (DDR2) supporting 533/667/800 MHz. The main memory can be expanded up to 4GB. The SO-DIMM modules supported are 512MB, 1024MB and 2048MB **DDR** Modules. The total memory size is automatically detected by the POST routine once you turn on your computer.

Memory Upgrade Process

1. Turn off the computer, and turn it over and remove the battery ([page 2 - 5](#)).
2. Locate the memory (RAM) bay cover and remove screws **1** - **10**.
3. Lift off the bay cover **11**.
4. Remove screws **12** - **14** from the RAM fan.
5. Disconnect the fan cable and remove the RAM fan **15**.

Figure 5

Disassembly

Figure 6
RAM Module Removal (cont'd.)

- e. Pull the release latch(es).
- d. Remove the module(s).

Contact Warning

Be careful not to touch the metal pins on the module's connecting edge. Even the cleanest hands have oils which can attract particles, and degrade the module's performance.

18. RAM Module(s)

- 6. Gently pull the two release latches **16** & **17** on the sides of the memory socket in the direction indicated by the arrows (**Figure e**).
- 7. The RAM module **18** will pop-up (**Figure f**), and you can then remove it.

- 8. Pull the latches to release the second module if necessary.
- 9. Insert a new module holding it at about a 30° angle and fit the connectors firmly into the memory slot.
- 10. The module will only fit one way as defined by its pin alignment. Make sure the module is seated as far into the slot as it will go. DO NOT FORCE IT; it should fit without much pressure.
- 11. Press the module in and down towards the mainboard until the slot levers click into place to secure the module.
- 12. Replace the RAM fan, cover and screws.
- 13. Restart the computer to allow the BIOS to register the new memory configuration as it starts up.

Removing the Processor

1. Turn off the computer, and turn it over, remove the battery ([page 2 - 5](#)) and RAM fan ([page 2 - 9](#)).
2. Locate the CPU heatsink and remove screws **1** - **4** from the heat sink in the order indicated on the label.
3. Disconnect the connector **5** from the mainboard and lift the heat sink **6** ([Figure b](#)) up off the computer.
4. Press down and hold the latch **7** (with the latch held down you will be able to release it).
5. Move the latch **8** and bracket **9** fully in the direction indicated to unlock the CPU.
6. Carefully (it may be hot) lift the CPU **10** up out of the socket ([Figure b](#)).
7. Reverse the process to install a new CPU.
8. When re-inserting the CPU, pay careful attention to the pin alignment, it will fit only one way (DO NOT FORCE IT!).

Figure 7

Processor Removal

- a. Remove the screws in the order indicated and
- b. Disconnect the connector and remove the heat sink.
- c. Press and hold the latch.
- d. Move the latch and bracket fully in the direction to unlock the CPU.
- e. Lift the CPU out of the socket.

Caution

The heat sink, and CPU area in general, contains parts which are subject to high temperatures. Allow the area time to cool before removing these parts.

6. Heat Sink
10. CPU

- 4 Screws

Disassembly

Figure 8

VGA Card Removal

- Remove the screws.
- Remove the cover.
- Remove the screws and disconnect the cable(s).
- Release the VGA card fans.
- Remove the screws.

Removing the VGA Card

- Turn off the computer, and turn it over and remove the battery ([page 2 - 5](#)).
- Locate the VGA bay cover and remove screws ① - ⑩.
- Lift off the bay cover ⑪.
- Remove screws ⑫ - ⑰ from the VGA card fans.
- Disconnect the fan cable(s) ⑱ & ⑲.
- Remove the VGA card fan ⑳.
- Remove screws ㉑ - ㉔ from the VGA card module(s).

8. Grip the handle and carefully lift the VGA card module **25** in slot A.
9. If two VGA cards are installed, disconnect the SLI cable **26** from the VGA card modules.
10. Carefully remove the VGA card module **27** in slot B from the mainboard.

11. Reverse the process to install a new VGA card modules.

Figure 9
VGA Card Removal
(cont'd.)

- f. Remove the VGA module from slot A.
- g. Disconnect the cable.
- h. Remove the VGA module from slot B.

Re-Installing Two VGA Cards

Make sure you connect the SLI cable to the appropriate connector on the VGA card. The cable connector marked J_SLI1 connects to the card in Slot A (Daughter), and the J_SLI2 connects to the card in Slot B (Parent).

25. VGA Card Module
26. SLI Cable
27. VGA Card Module

Disassembly

Figure 10
VGA Card
Installation

a. Carefully Insert the VGA Card.

Installing the VGA Card

1. Prepare to fit the VGA card **25** into the slot by holding it at about a 30° angle.
2. The card needs to be fully into the slot, and the VGA card and socket have a guide-key and pin which align to allow the card to fit securely.
3. Fit the connectors firmly into the socket, straight and evenly.
4. DO NOT attempt to push one end of the card in ahead of the other.
5. The card's pin alignment will allow it to only fit one way. **Make sure the module is seated as far into the socket as it will go** (none of the gold colored contact should be showing). DO NOT FORCE the card; it should fit without much pressure.
6. Secure the card with screw **24** (*Figure 9g on page 2 - 13*).
7. Place the heatsink **23** back on the card, and secure the screws in the order indicated in *Figure 8 on page 2 - 12*.
8. Attach the VGA card fan and secure with the screws as indicated in *Figure 8 on page 2 - 12*.
9. Reinsert the component bay cover, and secure with the screws as indicated in *Figure 8 on page 2 - 12*.

a.

25. VGA card

Removing the Keyboard

1. Turn off the computer, and turn it over and remove the battery ([page 2 - 5](#)).
2. Press the **four** keyboard latches at the top of the keyboard to elevate the keyboard from its normal position (you may need to use a small screwdriver to do this).
3. Carefully lift the keyboard **5** up, being careful not to bend the keyboard ribbon cable **6** ([Figure c](#)).
4. Disconnect the keyboard ribbon cable **6** from the locking collar socket **7**.
5. Carefully lift up the keyboard **5** ([Figure d](#)) off the computer.

Figure 11
Keyboard Removal

- a. Press the four latches to release the keyboard.
- b. Lift the keyboard up.
- c. Disconnect the cable from the locking collar.
- d. Remove the keyboard.

Re-Inserting the Keyboard

When re-inserting the keyboard firstly align the **five** keyboard tabs at the bottom ([Figure b](#)) at the bottom of the keyboard with the slots in the case.

5. Keyboard

Disassembly

Figure 12
Wireless LAN
Module Removal

- a. Remove the screws.
- b. Remove the keyboard shielding.
- c. Disconnect the cables and remove the screws.
- d. Remove the WLAN module.

Note: Make sure you reconnect the antenna cables to the “Main” and “BT” socket (Figure c).

3. Keyboard Shielding
9. Wireless LAN Module

- 4 Screws

Removing the Wireless LAN Module

1. Turn off the computer, and turn it over, remove the battery (page 2 - 5) and keyboard (page 2 - 15).
2. Remove screws ① - ② from the keyboard shielding.
3. Remove the keyboard shielding ③, the Wireless LAN Module will be visible at point ④.
4. Carefully disconnect cables ⑤ & ⑥ and remove screws ⑦ - ⑧.
5. The Wireless LAN Module ⑨ (Figure c) will pop-up, and you can remove it.

Removing the Bluetooth Module

1. Turn off the computer, and turn it over, remove the battery ([page 2 - 5](#)), keyboard ([page 2 - 15](#)) and keyboard shielding ([page 2 - 16](#)).
2. The Bluetooth module is visible at point **1**.
3. Carefully disconnect cables **2** & **3** and remove the screw **4**.
4. Lift the Bluetooth module **5** off the computer.

a.

b.

Figure 13
**Bluetooth Module
Removal**

- a. Disconnect the cables and remove the screw.

- 1 Screw

Disassembly

Figure 14
Modem Removal

- a. Remove the screws and disconnect the cable.
- b. Lift the modem up off the socket.

Removing the Modem

1. Turn off the computer, and turn it over, remove the battery ([page 2 - 5](#)), keyboard ([page 2 - 15](#)) and keyboard shielding ([page 2 - 16](#)).
2. The modem is visible at point ①.
3. Remove the screws ② - ③ from the modem module and disconnect cable ④.
4. Lift the modem up off the socket ⑤.
5. Lift the modem ⑥ up and off the computer.

6. Modem

- 2 Screws

Removing the TV Tuner Card

1. Turn off the computer, and turn it over, remove the battery ([page 2 - 5](#)), keyboard ([page 2 - 15](#)) and keyboard shielding ([page 2 - 16](#)).
2. The TV tuner card is visible at point ①.
3. Carefully disconnect the cable ② and then gently pull the two release latches ③ - ④ on the sides of the module socket.
4. The TV tuner card ⑤ will pop-up and you can remove it.

Figure 15
TV Tuner Card
Removal

- a. Disconnect the cable and pull the release latches.
- b. The TV tuner card will pop up and remove it.

Appendix A:Part Lists

This appendix breaks down the *D900C/D901C* series notebook’s construction into a series of illustrations. The component part numbers are indicated in the tables opposite the drawings.

Note: This section indicates the *manufacturer’s* part numbers. Your organization may use a different system, so be sure to cross-check any relevant documentation.

Note: Some assemblies may have parts in common (especially screws). However, the part lists DO NOT indicate the total number of duplicated parts used.

Note: Be sure to check any update notices. The parts shown in these illustrations are appropriate for the system at the time of publication. Over the product life, some parts may be improved or re-configured, resulting in *new* part numbers.

The image shows a complex PCB layout for a JMB361/JMB368 SATA-to-CD-ROM adapter. The layout is divided into several functional areas:

- Top Section:** USB 2.0 interface with D+ and D- signals, and a 5V supply. It includes a USB connector and various passive components like capacitors and resistors.
- Middle Section:** SATA interface with SATA_0, SATA_1, and SATA_2 signals. It includes a SATA connector and various passive components like capacitors and resistors.
- Bottom Section:** CD-ROM interface with CD-R, CD-L, and CD-D signals. It includes a CD-ROM drive and various passive components like capacitors and resistors.
- Central Area:** The JMB361/JMB368 controller chip, which is the core of the adapter. It is surrounded by various passive components like capacitors and resistors.

The layout is annotated with component values, pin numbers, and signal names. A 'Layout note' box highlights the importance of signal spacing and routing for the CD-R and CD-L signals.

Layout note:

- CD-R & CD-L & CD-I must parallel routing to Audio Codec. The wide is 12mils and space must be equal.
- Signal: Space = 1:2
- Signal: Space = 1:1
- Signal: Space = 1:1
- Signal: Space = 1:2

The diagram illustrates the pin connections for the SATA HDD connector. The connector is labeled J_SATA2 and has pins 1 through 20. The pin connections are as follows:

- Pins 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20: SATA RX0# to SATA RX10#
- Pins 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20: SATA TX0# to SATA TX10#

The diagram also shows the internal wiring of the connector, including the 60MIL connector, the 100U/10V(D)R resistor, and the 100U/10V(D)R capacitor.
